

Education System in Host Country

The Doctor of Dental Medicine program is a six-year program consisting of basic science, clinical science and community dentistry courses. The DMD program aims to produce graduates for the general practice of the profession who are scientifically knowledgeable, technically-capable and socially-sensitive in the maintenance of health. The graduate shall advance oral health as an integral part of general health and total well-being of the individual. The Doctor of Dental Medicine program aims to produce graduates who are adept in the prevention, diagnosis, identification and management of oral needs and diseases of the individual and the community. The graduates of the Doctor of Dental Medicine program can pursue a general dental practice after passing the Dentist Licensure Examination.
